

## Calcular el total de la venta

Este procedimiento utiliza la función para poder calcular el total y esta devuelve el resultado.

The image shows two screenshots of a SQL IDE window titled "venta".

The first screenshot displays the creation of a stored procedure named `ProbarCalcularTotalVenta`. The code is as follows:

```
1 DELIMITER $$
2
3 CREATE PROCEDURE ProbarCalcularTotalVenta(
4     IN p_Sub_Total DECIMAL(10,2),
5     IN p_Iva DECIMAL(10,2),
6     OUT p_Total DECIMAL(10,2)
7 )
8 BEGIN
9     -- Calcular el total usando la función
10    SET p_Total = CalcularTotalVenta(p_Sub_Total, p_Iva);
11 END $$
12
13 DELIMITER ;
14
15
```

The second screenshot shows the execution of the procedure and the resulting query:

```
1 CALL ProbarCalcularTotalVenta(200.00, 32.00, @resultado);
2 SELECT @resultado AS Total;
3
4
5
6
```

Below the code editor, the "Result Grid" is visible, showing the output of the query:

| Total  |
|--------|
| 232.00 |
